

Edible Marshmallow SLIME

Source: www.forkly.com ✨ (Sarah Nicole in [Recipes](#) on May 23, 2017)

If you've been anywhere near kids in the last few years you've probably have heard them talk about the latest and greatest (why won't it go away?) trend, SLIME.

This slime is different because instead of using harsh chemicals and soaps, it's completely edible. With clean hands, kids can create and color their slime and play with their food for once! If they eat it, no harm!

Send us your photos! VP@BGCCLIFTON.ORG

Ingredients

- 1 bag mini marshmallows
- 2 tbsp coconut oil, plus additional for mixing
- 1/2 cup corn starch, plus additional for mixing
- 1/2 cup icing sugar, plus additional for mixing
- Food coloring

Equipment

- Stovetop Pot
- Mixing Bowl

Servings: 3

Method

1. At a medium heat, add your marshmallows and coconut oil to a large pot and mix continuously until melted (you can do a microwaved version of this as well).
2. Once melted, pour your marshmallow melt into a mixing bowl and add in corn starch and icing sugar.
3. Mix with your hands. Note: this will get STICKY! To help with this, coat them in coconut oil.
4. Transfer the mixture onto a cornstarch coated surface, and continue to knead and mix until the *right* slime consistency is reached. It should be stretchable and not sticky. Keep adding corn starch, icing sugar and coconut oil until you feel happy with your texture.
5. Divide the slime into three, and do drops of food coloring on each. Knead again to mix the colors.
6. It's finished! Roll, stretch & play with your slime (and it's ok to take a bite, too!).
